

Coding & Solution

Date	29 June 2026
Team ID	xxxxxx
Project Name	Emotion Detection and Learning Support Engine
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/rajeevkumar04/emotion-detection-and-learning-support-engine
Programming Language(s)	Python, JavaScript
Framework(s) Used	Flask, React

Key Features Implemented	Emotion detection using facial expressions, Personalized learning recommendations, User authentication, Dashboard, Progress tracking
Pending / Incomplete Features	Voice emotion detection (if pending), Advanced analytics (if pending), Deployment (if pending)
Setup / Run Instructions	1. Clone the repository. 2. Install dependencies (pip install -r requirements.txt and npm install). 3. Run the Flask backend (python app.py). 4. Start the React frontend (npm start). 5. Open the application in a web browser.

Code Quality Checklist

S.N o	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes(If on Github)

Additional Notes / Comments: The project follows a modular architecture with separate frontend and backend components. Meaningful naming conventions, reusable functions, and proper error handling improve maintainability and readability. Version control is used to track development, and the application meets the core functional requirements.
